

Slide 1

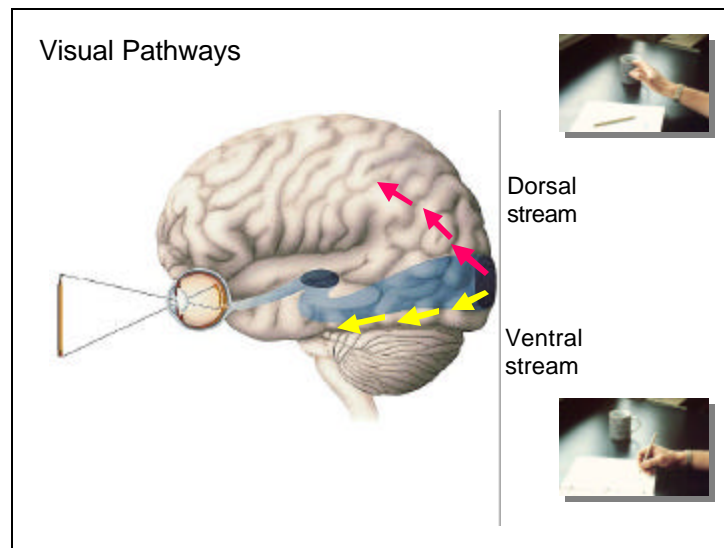

Banbury Center, May 14 2001

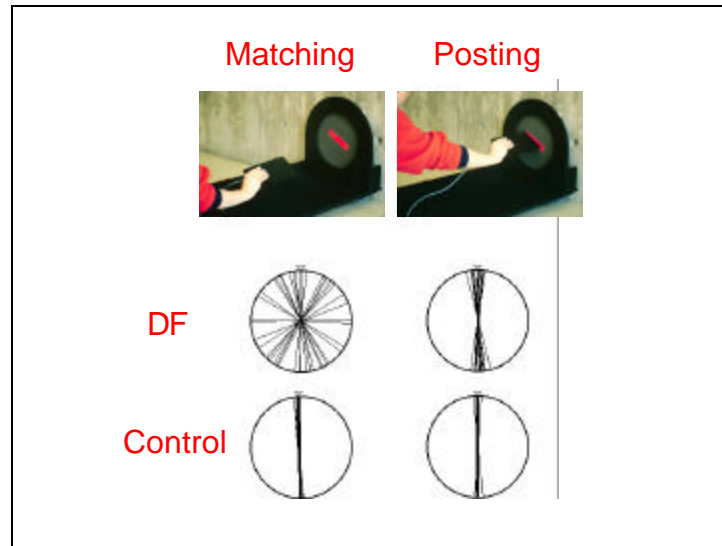

Why we need two cortical visual systems: A tele-assistance model

Mel Goodale
Director
CIHR Group on Action and Perception
The University of Western Ontario

Slide 2

Slide 3

Slide 7

Optic ataxic patient
(posterior parietal lesion)

Perenin, M.-T., & Vighetto, A. (1988).
Brain, 111, 643–674.

Slide 8

fMRI Studies of Grasping

Dr. Jody Culham

4-T magnet, London , Ontario

Slide 9

The "Grasparatus"

Slide 10

THE TASKS

Cued by Fixation LED color

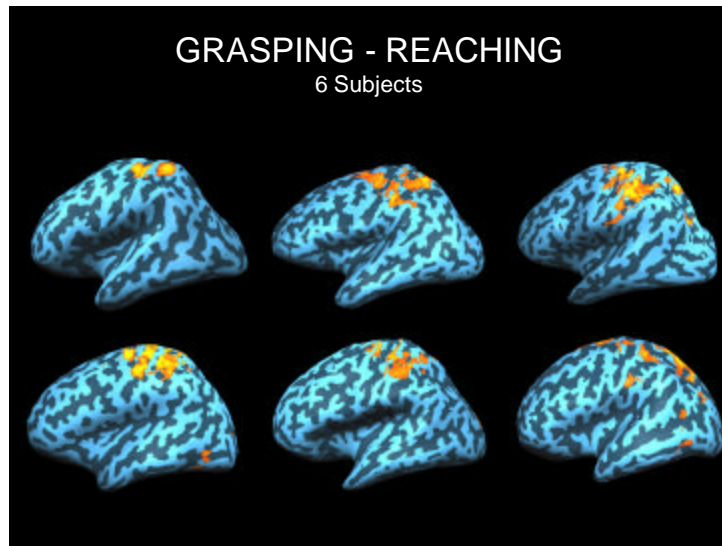

Grasping

- precision grip = finger + thumb
- transport + grip components
- requires object processing

Reaching

- touch object with knuckles
- transport component only
- does not require object processing

Slide 11

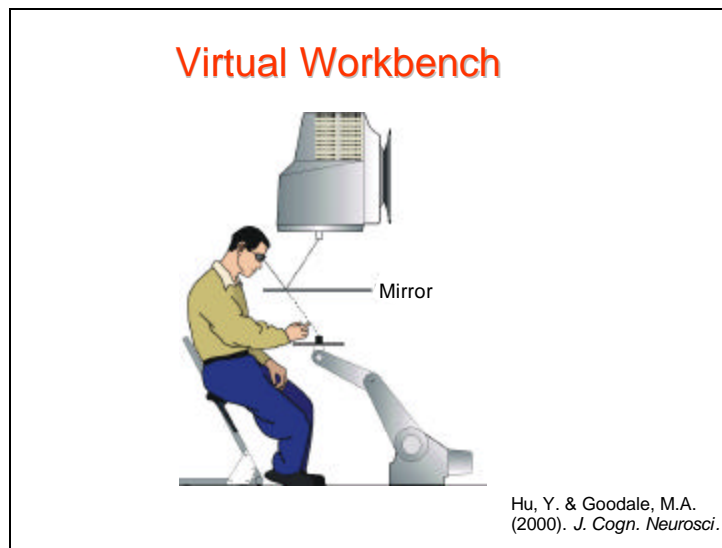

Slide 12

Ventral Stream	Dorsal Stream
Scene-parsing and object identification	Visual control of motor output
Scene-based frame of reference	Effector-based frames of reference
Relational metrics	Absolute metrics
Propositional	Isomorphic
Long-term representations	Moment-to-moment computations
“Conscious”	“Unconscious”

Goodale, M.A. & Humphrey, G.K. (1998). *Cognition*.

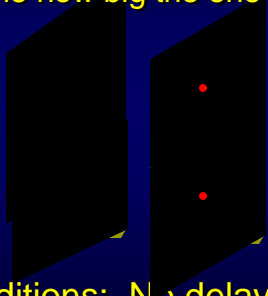

Slide 13

Slide 14

Real-time vs. Delayed Estimation

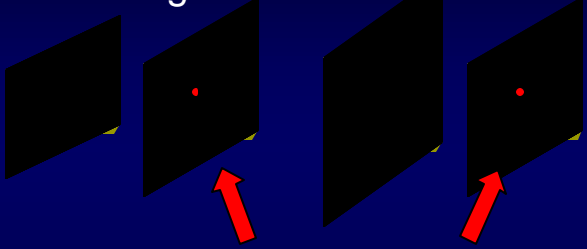

“Show me how big the one with the dot is”

Two conditions: No delay vs. 5s delay

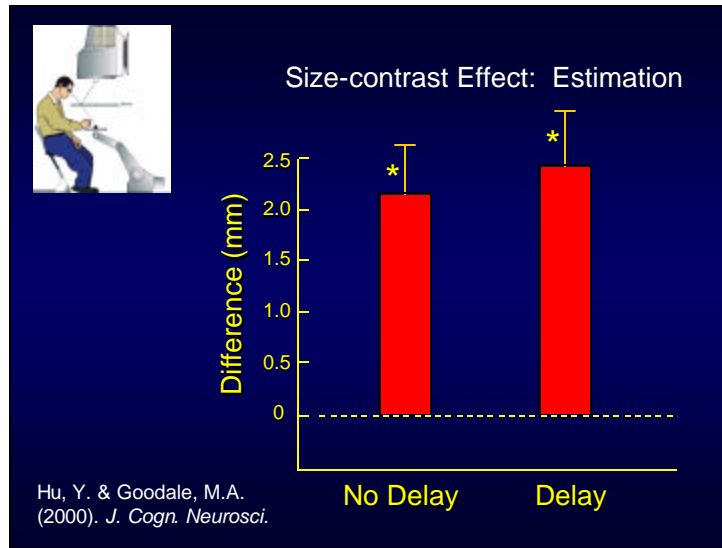

Slide 15

Measuring the Size-contrast Effect

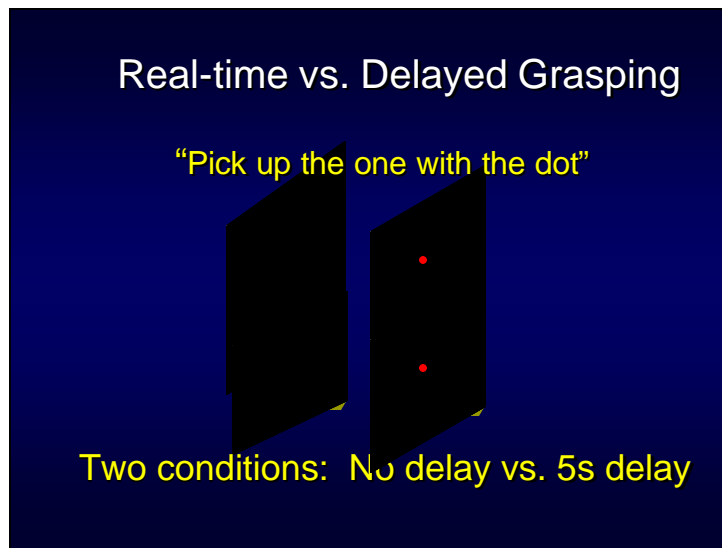

Difference Score = “Larger” - “Smaller”

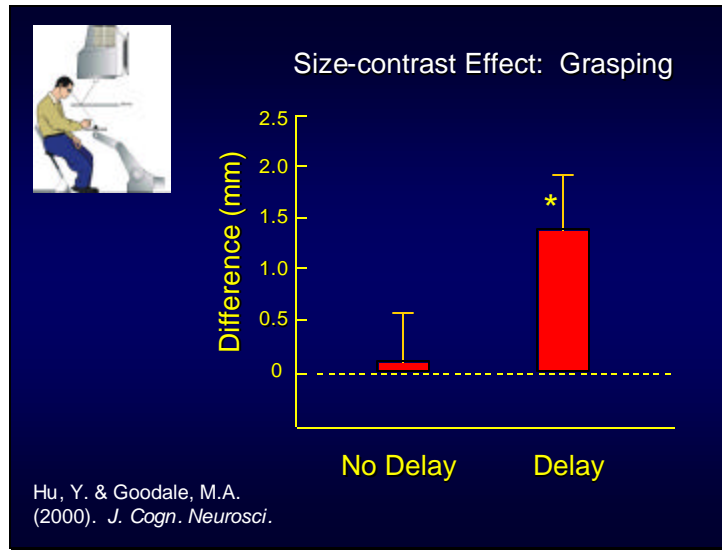

Slide 16

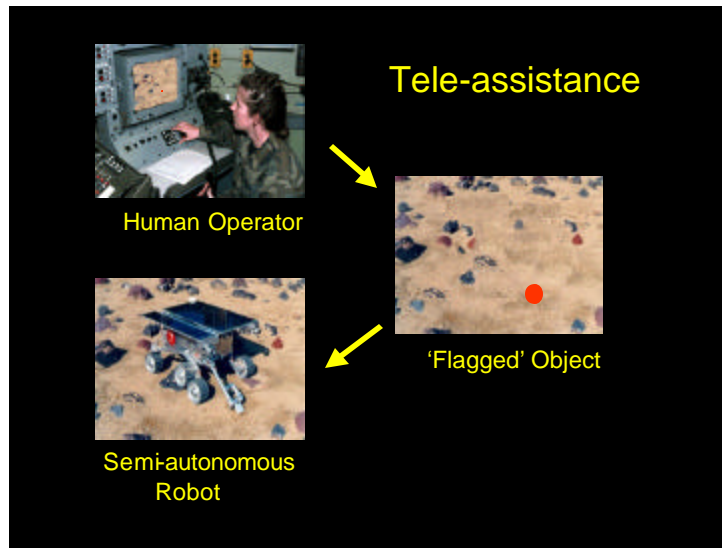

Slide 17

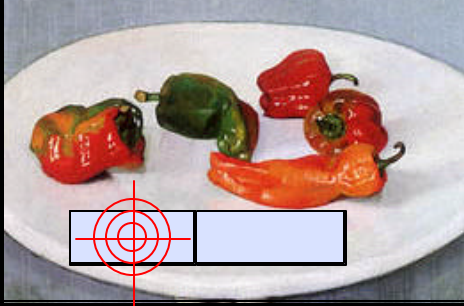

Slide 18

Slide 19

Slide 20

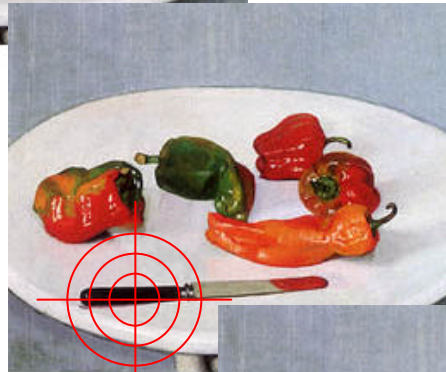

But how does the dorsal stream 'know' what the location, dimensions, orientation, and shape of the goal object are?
In other words, how does the ventral stream actually 'flag' the goal object in a frame of reference that the dorsal stream can understand?

Slide 21

Biological Teleassistance

Ventral stream processing
(Human operator)

Marked by re-entrant signals
in area V1+ →

Dorsal stream processing

The great end of life is not knowledge
but action.

Thomas H. Huxley
1825-1895
